Low Vision Information

Low Vision? We Can Help!

Enhanced Vision understands the challenges when someone is diagnosed with low vision. Our extensive line of low vision aids and electronic magnifiers have helped thousands of people regain their visual independence.

Causes of Low Vision

The National Eye Institute (NEI) estimates that more than 4.2 million American adults over the age of 40 experience vision loss. This condition is most often the result of eye disease. Medical conditions that may also contribute include:

- Cataracts
- Diabetic retinopathy
- Glaucoma
- Macular degeneration

Treating the underlying cause for low vision with medications, vitamin therapy or surgical procedures may help slow the progression of vision loss, but some sight loss may never be able to be restored

Recognizing the Signs of Vision Loss

The symptoms of vision loss vary, depending on the root of the problem. The NEI has developed a series of questions to help people to determine if they may have low vision. Even with your regular glasses, do you have difficulty:

- Recognizing faces of friends and relatives?
- Doing things that require you to see well up close, like reading, cooking, sewing, or fixing things around the house?
- Picking out and matching the color of your clothes?
- Doing things at work or home because lights seem dimmer than they used to?
- Reading street and bus signs or the names of stores?

Answering “yes” to any of these questions may indicate a case of low vision and should be checked by an eye doctor.

Living with Low Vision

People who are diagnosed with low vision are encouraged to take advantage of assistive technologies that are designed for people with visual challenges. People with eye conditions may be able to read large print books and magazines more comfortably with the help of assistive devices. Many people with vision loss will use a combination of several different vision impaired aids to accomplish routine tasks.

Top 5 Questions to ask when looking for an electronic magnifier

1. How can an electronic magnifier help me?

An electronic magnifier can help you read, write, see loved ones, enjoy hobbies and remain independent.

2. What type of electronic magnifier would work for me?

Some magnifiers are desktop, which are great for extended use at home, work, or school. There are also battery-operated magnifiers that are portable and great for travel.

3. How much do electronic magnifiers cost?

Electronic magnifiers vary in cost, depending on the extent of the features being offered. It is important to find one that fits your needs and budget.

4. Should I try out electronic magnifiers?

Because all visual conditions are different, it is highly recommended that you request a product demonstration to make sure it works for your specific needs.

5. Are electronic magnifiers easy-to-use?

Some electronic magnifiers are extremely easy to set-up and you can start using with a simple push of a button.
