

## **OPERATION KIDSIGHT - TESTIMONIALS**

**October 31, 2010**

***THANK YOU!!!! My daughter was screened at her preschool in Sept. and your test revealed she was extremely farsighted and needed a full exam. We took her to an eye doctor who found she also had an enlarged optic nerve. Through this we discovered her cerebellum is larger than it should be, restricting the flow of spinal fluid out of her brain. Thanks to you, we would have never guessed she had any vision problems or that anything else was wrong and we caught this before any permanent damage was done to her sight or her nervous system. Thank you again.***

**November 1, 2010**

***Our son attends Noah's Ark Preschool at First Christian Church in Newburgh, IN. On October 6, 2010 your program performed a vision screening on him, and detected a vision deficiency and notified us of the results and suggested we take him to an eye doctor for additional screening. I took him in the day we received the results, and we were told that he does in fact have a deficiency in his right eye that requires eye glasses and some additional at home therapy. Because of your work with Noah's Ark Preschool, and your wonderful program Operation Kid Sight, we were able to catch this problem early enough to get him the corrective treatment that he needs to hopefully fix, or at least lessen the deficiency in his right eye.***

***Our family would like to thank you for bringing your program to our son's preschool and providing us with this very important information. We greatly appreciate the screening your program does for these young children, because without this program, we may not have known of his problem before it was too late.***
