

Abbotsford and Aldergrove Lions clubs with the help of Lions Club International Foundation with a matching grant paid for a "Vestibular Head Impulse Test equipment (VHIT)". The total cost of equipment is \$33,912.76

The VHIT measures abnormalities versus normal function in ALL 6 semicircular canals of the eye.

The VHIT machine is portable, does not cause motion sickness or nausea and poses no ill effects for the patient.

Vestibular screening appointments are shorter with VHIT and can reduce wait times by completing 200/300 assessments in the time it takes current equipment to complete 100.
