Asus rt-ac86u ac2900 router range

RENE D. Silencio 8 November 2018 Silencio Automatically translated from Dutch Router with the best price / quality ratio on the market! Patrick Kerkhoff Silence 17 April 2019 Silence Automatically translated from Dutch Quick setup and many possible adjustments Make mesh network possible later Extensive parental controls options Great scope Nice to come back with Asus again. After a few months trip to a TP-link deco M5 set of 3 decos, I'm glad to return to an Asus router. I got rid of an AC66U, but it broke. I walked to the M5 where I found many limitations and problems, the biggest problem is the buggy firmware, which made the stability of the network difficult. This was known by TP for a long time, but a solution did not come. Now lower the AC86U and what a relief. Our network is stable again, the children no longer complain and the coverage compared to the M5 and the AC66U has improved. In addition, the speed at which you can navigate has improved significantly. There is no more hiccups with netflix on 4 different TVs at the same time, while it also uses laptops and smartphones at the same time. The configuration was a breeze. Within 10 minutes the network was back online (including security). It is nice that multiple guest networks are possible and with the purchase of another Asus router that supports mesh, it is possible to create a decent mesh network. Asus regularly releases firmware updates, but it is also possible to reduce or use Merlin firmware again after updating the firmware. Patrick Kerkhoff Silence 17 April 2019 Silence Automatically translated from Dutch A power station in all areas. Dave van Slingerland Quiet 23 November 2017 Quiet Automatically translated from Dutch Adaptive Quality of Service (LAN Boost). The Wifi range is great. Security. I can only put it one way. Price. Previously I had a Ziggo cisco standard that did not have good wifi and often caused disconnections when playing on PS4pro. Put the Ziggo modem in bridge mode and put this router behind it. In use for 1 day now now What a difference with my ziggo modem. It's all a lot faster and my ping's much smaller. The web interface is clear and super easy to configure it correctly, it was done in 15 minutes. You can set the router that has priority. So, in my case, the games always have priority, for example, the download. You can configure this to your taste with dragging and dropping, see image. Wifi is really great and now I really have 5G full force in all rooms. What was not the case with Ziggo's modem. The app for your phone is also informative and can be useful to check the status of your router or make the settings. I still don't know if the app works externally outside your network, but I think the web interface does. Fortunately, the router lights are not super bright and can also switch off with a button on the back. The only thing is that you can place the router on 1 track and that's in vertical position. So you can't hang the router on the wall. I have not yet named many options, but the router is really super extensive in features and configurations. In my opinion, it's a really cool device. Dave van Slingerland 4 November 23, 2017 Δ Automatically translated from the Dutch fast device that can be adjusted to everyone's wishes. Quick CPU Lots To configure with Merlin Firmware VPN Server and the default firmware of the client is not stable, the device is widely adjustable. It is better to download and install the MERLIN firmware. I use a VPN service and this device with your CPU fast is ideal for that. No more customers on PCs. Willem NEYT A March 15, 2018 Δ Automatically translated from Dutch Asus Shines again with your AC86U game router! Good construction quality! WIFI Change In 2.4 GHz and 5 GHz AIPROTECTORIO; Inbuilt Internet Threat Security Software Aimesh - Router Suitable to extend the range in the future when buying a new Asus router. Red housing accents may not be for everyone's taste if it is visible. It is not possible to hang the purchase of this AC86U ASUS is to replace replace previous generation of ASUS router, namely the AC66U. The ASUS AC86U is quite an improvement compared to the AC66U. The router housing again feels solid. It is black with LED indicator lights on the front. The red accents on the front emphasize the line of ASUS players. The installation of the ASUS AC86U is very simple, as is the AC66U. The antennas must be fitted to the router, the necessary network cables connected and the router must be supplied with power. After that, you can go through the easy-to-use configuration wizard to configure the basic functionality of the router. The advanced user can easily become familiar with the user-friendly interface provided by ASUS. It also responds much faster than the old AC66U. The first thing you notice is the wireless range. Previously, the wireless connection with us came out when people left the house or went into the garden. With the ASUS AC86U, that's a thing of the past. 5 meters outdoors and in the garden we still have range through the frequency 2.4Ghz. The router is placed in the most favorable place of the house, i.e. on the middle floor. One now has connection up and down at the 5Ghz interior frequency. That was not possible with the AC66U on 5Ghz. My PC is also equipped with a PCE-AC88 adapter for optimal speed in combination with the AC86U. This gives me a more stable connection, which is noticeable while playing. For example, there is little 'lag/delay' and I can see all the graphics (which is sometimes lost with a bad Wifi connection). In addition, this router is equipped with built-in security software. ASUS calls this feature AiProtection. This will automatically block many (not all) Internet threats. I've had this on for a while now and in the log you see a lot of internet threats that have been prevented. All of these are automatic processes that reside on the Internet. So all of the You have to deal with it. So it is the functionality that, after seeing the I appreciate it! The ASUS AC86U also has AIMESH functionality. This allows the router to be used in the future to increase the wireless coverage if it is going to be invested in a new ASUS router (which should also be equipped with AIMESH). This gives Router a second life, if it reaches the point where it is replaced by a new and still functions. This is something that the future will show if I decide to connect a second router compatible with AIMESH. With devices that support MU-MIMO functionality, the router can handle devices at the same time. This means that all MU-MIMO devices can send and receive data at the same time. Instead of each device having to wait for your turn (the average user will not be realized.) In our area there are several smart, portable telephones and a pc connected wirelessly. So far everything works stable and there is no remarkable delay. Not even during our peak hours (Evening.) All I am very satisfied with this purchase! The router is rapid, the Wifi range (for us) enhanced enormously and the AiPROTECTION is a great asset for the safety of the network! The router is promoted as a game router, but I highly recommend it to non-players too! The ASUS AC86U is a Super Router! Jason Silence 5 August 2019 Silence Automatically translated from Dutch Best Powerhouse for use with VPN also. Very good range full speed through custom firmware OpenVPN Price but it's worth choosing these if you do not want to sacrifice speed when using a VPN client! Very easy configuration through OpenVPN (also through Merlin Firmware is recommended). Item. The AC68 Now I only have my full download speed (about 95 Mbit / s in comparison with 20 Mbit / s.) Router a little bulky with antennas but you get the speed and range in exchange (now good speed in the Difficult places.) Lights can be turned off. BVG. 12 August 2018 – Automatically translated from Dutch "VPN Beast" Quick Processor AsusWRT Merlin Foot Model I brought to replace my AC66U. Because I want to run everything through the VPN, I doTo trade in the AC66U. This pulls in fact Max. 10-15Mbps through Ibanish. According to RMERLIN, the AC86U is 'a beast' with respect to the speed of OpenVPN! My requirements were an ASUS brand router (in relation to ASUSWRT MERLIN) and the highest VPN speed possible. In my 200/20 Mbit / S connection, easily extracted 190 Mbps down and 20 Mbps on the Frankfurt server (IPVANISH) in the 5 GHz. Range much better than my old router: 2.4GHz in the staff more than 70 Mbps and 5 GHz more than 120 Mbps. With the old router there was no arrival there. In general, do not regret the purchase; it is not the cheap router, but it is worth the money. RK | September 7, 2018 | Automatically translated from Perfect Dutch and Value for Speed Money and Perfect Wifi Range, even on the ATTICO, there are no 2-piece firewall problems and the virus scanner do your job NAS connected to the router Smart Connect Ideal Always the wireless transmission More quickly on any Super Easy Setup device and very secure creates passwords for Wifi first and, only, then continued by connecting the AiProtection configuration is still a little seashed before all Verification marks are green. But it works a great large Plug and Play product and everything that is configured within half an hour immediately an update of the available firmware 1 Click on the button and upload the firmware and install it. Redundant bit, but you can create 2 x3 guest networks 3 in 2.4 GHz and 3 in the 5.0 GHz printer with connection and NAS at no time, it is very easy to find. Even manually inserting an IP address is because everything is very clearly arranged in the Geert Boerakker configuration | February 2, 2018 | Automatically translated from the Rapid Dutch Router with a good speed of security and the installation ease LEDs on the front OpenVPN can be deactivated OpenVPN Firmware Safety "Trend-Micro" has a qualitative and rapid safety failure game hardware, however, ASUS has in the standard firmware security failures that make it possible to open a casing that can execute the code Malicious externally. This is it has been tested with (OpenVA), so immediately replace it with ASUSWRT-MERLIN firmware to fix it. This is better than the original in every way. Roger | January 31, 2019 | Automatically translated from Dutch Very good DFS router speed range Many options Stable design Very solid router. Fast and stable, and has many options to optimize. 9/10. N.I. van rijn | December 24, 2018 | Automatically translated from Dutch You can select one of the following insurance in your shopping cart.
