Some conventional heaters are quite small, while others are built to look like steam radiators. But in a year-round home, insulation or stripping is often a better solution than a portable heater. Can A heater SAVE?Homeowners can save money by turning off the thermostat that controls the furnace and using a portable electric heater to heat a room? Jeffrey Mahlstedt, marketing director of Del-Rain Corporation of Niagara Falls, N.Y., which produces Pelonis, said: "A conventional resistance heater has temperatures above 1,000 degrees Fahrenheit, but ours is 390 degrees, well below the burning point of the paper. If small size is an advantage, ceramic heaters are among the smallest.Ceramic heaters also have a safety advantage, as the hottest part of a ceramic heater is much colder than the hottest part of a conventional electric heater. The answer is, "It depends." Rotating the thermostat to 60 degrees and using an electric heater to raise the temperature of a room to 70 toasted can save fuel that would otherwise be burned in the oven. But the first truth about electric heaters, as ceramic model manufacturers also acknowledge, is that the standard 1,500-watt model provides 5,200 British thermal units per hour. An engineering marvel! A" and A"Finally, a safe and economical source of portable heatA." The hint, particularly eye-catching during the recent frost spasm, is that expensive high-tech models provide a cheaper heat source. They come with names like "Disc Furnace" and "The Heat Machine" and appear in advertisements that tout a product ocifitneics ocifitneics ocifitneics nU "A emoc isarf noc . According to the National Fire Protection Association, in 1987, the most recent year for which data are available, space heaters caused 130,000 domestic fires, with 680 deaths. They are popular in garages and other semi-enclosed indoor environments, but have fallen out of favor for domestic use because they pollute indoor air and are prohibited in some locations. While electricity A" by far the most popular way to heat a single room, consumers should be wary of cost claims in advertisements often take on a price of electricity seven cents per kilowatt hour. Translation: for a given quantity of electricity, all electric heaters provide the same amount heat, whether using ceramic components or simple metal coils.Ceramic models cost much more!: Pelonis Disk Furnace, the first and most popular ceramics manufacturer, retails for about \$125, about three times the cost of a reel model. But Consumer Reports, based on its own lab tests, said last November that as a group ceramics have poor performance in distributing their heat.Among electric heaters, ceramics are gaining ground quickly. But if the owner of the house comes out early depends on the price of the electricity and the cost of the fuel the oven uses.
