Snapchatは、多くの優れた機能を備えているため、ユーザーのお気に入りのチャットアプリの1つです。スナップだけでなく、Snapchatで送信するものはすべて24時間後に自動的に削除されます。Snapchatは新しいアップデートと機能を非常に頻繁にリリースします。ダークモードは、テクノロジー業界で最近流行しているニュースの1つです。Snapchatでダークモードを利用できますか？答えはいえです。 さて、Snapchatのダークモードは他のソーシャルメディアアプリより少し遅れて到着しました。 Snapchatの前に、Facebook、Instagram、Redditなどのコミュニケーションアプリはダークテーマをリリースしていましたが、それでも、Snapchatダークテーマには制限があります。 iOSアプリでのみ、Snapchatはダークテーマをリリースしました。 Androidユーザーの場合、アプリには専用のダークモードがありません。 iPhoneでSnapchatダークモードを有効にする方法
#1起動 Snapchat アプリの左上隅にあるBitmojiをクリックして、プロフィールを移動します。
#2を選択します Settings 画面の左上隅にあります。
#3下にスクロールして、App Appearance ページの下部にあります。
#4それをクリックすると、3つのオプションがあります。 Match System：これはiPhoneのディスプレイ設定と一致します。 Always Light：これは通常の明るい外観を使用します。 Always Dark：これはダークテーマを適用します。
#5選択 Always Dark Snapchatでダークテーマを有効にする3つのオプションから。 Snapchatでダークモードを取得する方法-Androidスマートフォン iPhoneとは異なり、AndroidデバイスはSnapchatのネイティブダークモードをサポートしていません。 ダークモードでSnapchatアプリを使用する必要がある場合は、スマートフォンの設定を少し調整する必要があります。 開発者オプションを変更する必要があります。 Androidスマートフォンを最新バージョンに更新して、新機能を手手してください。
#1オープン Settings Androidデバイスで選択します Display。
#2リストから、を見つけて有効にします Dark mode お使いのデバイス用。
#3さて、 Settings メインページを表示し、表示されるまで下にスクロールします About phone。
#4それをクリックして選択します Software Information。
#5をタップします Build Number を示す通知が表示されるまで繰り返し Developer option is enabled。
#6さて、 Setting page を選択します Developer options。
#7ここで、 Override force-dark（または Force Dark mode サムソンのスマートフォンの場合）Snapchatでダークモードを取得します。
#8ここで、Snapchatアプリを起動すると、背景が暗いまたは黒で開きます。 上記の方法は、Snapchatの古いバージョンでのみ機能します。 最新バージョンのSnapchatでダークテーマをオンにするには、公式リリースまで待つ必要があります。 Snapchatアプリには、ナイトモードまたはローライトモードと呼ばれる独自の機能もあります。 スナップを撮ると、三日月形のアイコンが表示されます。 このアイコンをタップすると、Snapchatでナイトモードが表示されます。 それで、Snapchatがダークモードになるのはいつですか？ それに対する答えはありません。 私たちに従ってください!ツイッターとフェイスブック 関連する技術アップデートのページ。 While a majority of popular apps have received a native dark theme over the last few years, there are still quite a few that don't offer the feature. Snapchat, for instance, still doesn't offer dark mode support. But that's set to change soon. The social media platform recently started rolling out a dark mode on iOS, and its Android app is set to receive similar functionality soon. But if you don't want to wait, you can use a simple workaround on a rooted Android phone to get dark mode on Snapchat right away. Snapchat rolled out a new "App Appearance" section in the app settings back in May. The section included three options — Match System, Always Light, and Always Dark — that let you automatically match the app theme with the iOS system theme, keep light mode on by default, or select the new dark mode as the default option. Although this setting isn't live on the Android version of the app, XDA Recognized Developer Quinny899 reports that it's possible to enable the in-development dark theme using the Preferences Manager app. Note: The Preferences Manager app requires root access, so make sure your phone is rooted before following the steps mentioned below. If you haven't rooted your phone, you can check out our detailed guide to get started. Here's how you can enable the in-development dark theme in Snapchat for Android: Download the Preferences Manager app from the Play Store.Select Snapchat on the app's home page and open the APP_START_EXPERIMENT_PREFS.xml file.In the file, locate the "DARK_MODE" flag, set it to "ENABLED," and you're good to go. As you can see in the attached screenshots, the workaround lets you access the in-development dark mode on Snapchat for Android. Do note that the dark mode is still very much a work in progress, so you may notice some inconsistencies. For instance, several screens have gray text on a black background and a few parts that still haven't been themed (see screenshots below). It's also worth noting that the Preferences Manager app requires root access, so the workaround will only work on rooted devices. You can follow the steps given in this post to root your phone. If that looks too complicated, then we'd recommend steering clear and waiting for Snapchat to officially roll out the new dark mode on Android. Since the feature is already available for several iOS users, it shouldn't be long before it rolls out on Android as well. Snapchat's default mode is the blinding white light that is stock on most apps and websites, but for anyone looking to give their eyes a rest this Dark Mode guide will walk you through the settings for both iOS and Android. Snapchat has been a cultural force ever since it released back in July 2011. For many users it has become engrained into their online lives, which often means using it late at night (or in otherwise dark places) where the brightness of the screen can be a big problem. Thankfully the app does have an in-house way to fix this problem, but it can be a little complicated to figure it out for first-timers. How to make Snapchat Dark Mode on iOS SnapchatTired of the Snapchat home screen burning your eyeballs? We've got the fix. For iOS users the process is an extremely easy one. All it takes is entering the app and pressing a few quick buttons: Open up the app and press your Bitmoji profile icon Select the settings wheel at the top right of your screen Scroll down the list until you find App Appearance and open it up Choose one of the three options: Always Light, Always Dark, Match System Always Dark will permanently lock your app into the easier-on-the-eyes mode, while Match System will default to whatever your device's preferences are internally set on. How to make Snapchat Dark Mode on Android Unsplash: May GauthierSnapchat on Android doesn't have the same level of accessibility for Dark Mode. Unfortunately not every user has access to Dark Mode on Android just yet, making it a bit tougher of a problem to solve. For those who do, the process will be the exact same as iOS: Open up the app and press your Bitmoji icon. Select the settings wheel at the top right of your screen Scroll down the list until you find App Appearance and open it up Choose one of the three options: Always Light, Always Dark, Match System Snapchat has announced they're working on a wider rollout for the system, but there's no timetable for when it will be universally available. If you're operating on an older version of Snap, you may be able to use Android Developer Mode to force the menus to be dark, but the latest versions of the app won't comply that way. That's all you need to know about enabling Dark Mode! For other Snapchat-related inquiries, check out our other guide content here. If you're like most people, you love Snapchat; and to make it even better, you can turn on dark mode, thus reducing eyestrain and battery consumption. So if you are unsure how to get dark mode on Snapch at on Samsung, iPhone, or any other mobile device, we tell you all about it below! Read on for all the details! What Is Dark Mode? Dark mode is a popular setting for digital displays that essentially inverts the colours of the traditional user interface of black (dark) text on white (light) backgrounds, thus reaping several benefits without compromising contrast and readability. For instance, dark mode is the better choice in low-light settings, as the limited amount of light it emits does not disturb other people or hurt your eyesight. Moreover, it uses significantly less battery and looks amazing to boot! How to Enable Dark Mode in Snapchat on iOS Phones? Getting dark mode in Snapchat on your iPhone takes only a few steps: Open Snapchat and tap the profile icon;Access settings by clicking on the gear icon;Scroll down to 'App Appearance';Select 'Always Dark'. Source: 9to5Mac Note: If you are using a system-wide dark mode, you can also select 'Match System', and if you haven't activated it yet, simply select it from Settings > Display & Brightness. How to Enable Dark Mode in Snapchat on Samsung Phones? While there is no official Snapchat dark mode for Samsung or other Android phones yet, the community has found a way to make that change (now and then). So if you are wondering how to use dark mode in Snapchat on Android, just follow these steps: Activate system-wide dark mode via Settings > Display;Turn on 'Developer options' by navigating to About phone > Software information and tapping on Build number a few times;Access 'Settings' and scroll down until you find and tap on 'Developer options';Look for the 'Force Dark mode' toggle under 'Hardware accelerated rendering'. Note: While the above steps apply to Samsung phones, users of other Android phones can expect to complete a very similar procedure. When toggled on, the force dark mode option requires apps to use the dark scheme even if they don't fully support it. However, as of now, this method only works with older Android versions. Therefore, you might have to wait for the official night mode on Snapchat if you have a newer Android phone. How to Enable Snapchat Dark Mode on Oppo, Vivo, or OnePlus? If you want to enable the Snapchat dark mode on Android phones such as Oppo, Vivo, or OnePlus, you might have better luck than Samsung users. Try out these steps: Open the Settings menu and navigate to 'Display' settings;Tap on 'Dark Mode Settings';Click on 'Dark Mode for third-party apps (Beta)';Toggle support for Snapchat. Source: MySmartPrice While this method works best for the aforementioned phones, it might work with other brands too. Even if it doesn't, you can still try out the other approach outlined above. Bottom Line Now that you know how to get dark mode on Snapchat for Samsung and other Android and iOS devices go ahead and toggle on this feature to enjoy a longer-lasting battery and rested eyes. Even if you may be unable to use Snapchat's official dark mode as of yet (depending on your device), the company assures its users they will implement it soon. FAQs: 1. How do you change the theme on Snapchat? Changing to a dark theme on Snapchat can be done in a few simple steps, varying depending on your phone type. Learn more in the sections above. 2. Does dark mode extend battery life? Yes, to a lesser or greater degree, depending on the type of phone screen you have. For example, while standard LCD displays use a lot of battery, even with dark mode, OLED displays can significantly extend your battery life when displaying black pixels. 3. Will Android users ever get dark mode on Snapchat? Snapchat promises to eventually implement its dark mode solution for all operating systems and platforms, including Android phones. 4. Why doesn't my Snapchat have dark mode? As of now, only iPhones support Snapchat's dark mode. Android users should read the sections above on how to get dark mode on Snapchat for Samsung and other phone brands.
