Theirs is called "Find My Mobile", and it comes automatically installed with all new Samsung Galaxy devices. This method is great if you have a broken screen, but your phone needs to meet all of the following criteria: Find My Mobile is installed on your phone. It will need to be connected to the internet. You have a registered Samsung account. Unfortunately, if your phone/account doesn't meet all of the above criteria, then this method won't help you out. Therefore, if you've made a backup using it, then you can now restore this. Part 3: Retrieve Broken Samsung Messages from Your Phone Carrier You might not be aware of this scary fact, but many phone carriers keep copies of your text messages (as well as your calls lists). Therefore, if what you're trying to restore is really important, and you have absolutely no access to your phone, you can contact your phone carrier. Some phone carriers, such as AT&T have an option for this in your account overview, but with other service providers you may need to contact their customer service department. Depending on the terms and conditions of your contract they may also charge an additional fee for providing you with this data. This method also depends on the country where you live. In some countries, due to privacy laws, keeping logs of your text messages might be illegal.
