Download the package.Upload the package using your plugins page > add new > upload or Extract the contents of .zip folder to wp-content/plugins/ folderActivate the Plugin via plugins pageOr you can go to your website dashboard > plugins > add new and search for visitor traffic real time statistics then download and activate it.Notes:\* After installing the plugin you need to go to plugin settings page and select your timezone.\* If youre using any caching plugins. Dont forget to clear your website cache.Purchase your licenses by visiting our website hereCheck your email (Inbox and Junk mail) to download the plugin zipped fileOpen your website dashboard > Plugins > Add new and upload the plugin file (zipped file)Activate the pluginGo to your website main menu > visitor Traffic ProNotes:\* After installing the plugin you need to go to plugin settings page and select your time zone.\* If youre using any caching plugins. Dont forget to clear your website cache.You can use one of the following short codes:[ahc stats widget] adds a front-end widget to display the site statistics\*[ahc stats widget title= fontsize=16 fonttype= display today visitors=true display today pageviews=true display total visitors=true display total pageviews=true ] adds a front-end widget to display the site statistics with custom paramters\*[ahc today visitors] this will return todays visitors\*[ahc today visits] this will return todays visits\*[ahc total visitors] this will return total visitors\*[ahc total visits] this will return total visits\*[ahc yesterday total visitors] this will return the yesterdays total visitors\*[ahc yesterday total visits] this will return the yesterdays total visitsAll the data is saved locally in your WordPress, its not necessary to create a data processing contract with an external company!This plugin doesnt officially support the multisite feature; But it should function without any issue. We will fully support multisite in the next releasesIf you are MAC user, you may face this problemYour browser (Safari) is automatically unzipping downloaded zip files ? And this is not good because i want the plugin file to still compressed as isTo fix this please do the following steps:Open SafariClick PreferencesUnder the General tab, uncheck the option Open safe files after downloadingYes, the cache support added in the latest 5 versions.If you're using any caching plugins, Dont forget to clear your website cache.Yes, this plugin is fully compatible with PHP 7.x and PHP 8.x. If you encounter any issues, please dont hesitate to report them.This plugin supports IPv6; however, PHP must be compiled with IPv6 support enabled; Yes, the plugin does its job in free. And I understand the advertising for PRO. But it is all over and in between the stats. Plus I had a popup just now. Maybe that will stop me from going PRO, because it annoys me to be forced to buy. Less is sometime more. Maybe you take care in the next updates. After extensively using the free version, I made the decision to upgrade to the premium version of this plugin, and I must say, its been a game-changer. In comparison to other popular plugins, this one stands head and shoulders above the rest. I highly recommend it. The name Real Time Statistics is misleading. There is only one real time stat and its users online count, nothing more. So, if you want a real time statistics, this plugin is not for you. Plugin name should be: Very Basic Traffic Stats. Also if you are buying a pro version, there is nothing more. Its not worth the money. If you want basic stats, then use free version. If you need something serious, do not buy, and go look for something more advanced traffic plugin. Not worth even a penny. best free analytics plugin Ive seen It worked for awhile, at least giving the number of hits. Now, its not reporting. Jetpack is giving me better stats. Im uninstalling it, I dont have time for broken stuff. 231 CSS Bug fixes.Fix map issue with opera browserCompatibility issue with certain ad blockers causing page display errors.Ensure \$vtr\_ip\_address is properly initialized before usage to prevent undefined variable warnings.Bug fixing in the browser statisticsBug fixing in the timezone settingsWordPress 6.7.1 supportchanging the upgrade to PRO linkWordPress 6.5.5 supportchanging the upgrade to PRO linkchanging the upgrade to PRO linkBug fixes NOTICE message Security Bug fixing in ajax requests (Broken Access Control)Bug fixingWordPress 6.3.1 supportSecurity bug fixing in ajax requestsWordPress 6.2.1 supportBug fixing in excel reports and search filtersCSS Bug fixesShortcode improvementsYou can use one of the following shortcodes:[ahc stats widget] adds a front-end widget to display the site statistics\*[ahc stats widget title= fontsize=16 fonttype= display today visitors=true display today pageviews=true display total visitors=true display total pageviews=true ] adds a front-end widget to display the site statistics with custom parameters\*[ahc today visitors] this will return todays visitors\*[ahc today visits] this will return todays visits\*[ahc total visitors] this will return total visitors\*[ahc total visits] this will return total visits6.4CSS enhancementsBug fixes NOTICE message6.3 6.2 6.1Bug fixing in traffic by IP report5.9Bug fixing (sweetalert conflict)5.8 5.7multisite (network) support5.6 You can use one of the following shortcodes:[ahc stats widget] adds a front-end widget to display the site statistics\*[ahc stats widget title= fontsize=16 fonttype= display today visitors=true display total visitors=true display total pageviews=true ] adds a front-end widget to display the site statistics with custom paramters\*[ahc today visitors] this will return todays visitors\*[ahc today visits] this will return todays visits\*[ahc total visitors] this will return total visitors\*[ahc total visits] this will return total visits5.5new feature (Shortcode instead of widget)[ahc\_stats\_widget] Please read the plugin description for more details5.4Bug fixing fix conflict with Dokan plugin5.3Bug fixing in the plugin accessibility5.2Bug fixing in the plugins page settings URL5.1Bug fixing in the plugin accessibility4.9Settings page bug fixing4.8new feature, User Role Exclusion From Statistics4.7 4.6 4.5Bug fixing in IP exclusion4.4Escape variables and and options4.3 4.2 4.1Security bug fixesfix IP exclusion issue3.17Bug fixes in settings part 23.16 3.15 3.14Bug fixes PHP warning message fixing another issue3.13Bug fixes PHP warning message3.12Bug fixes NOTICE message3.11Query improvements reported by @purityboy83 (Thanks purityboy83 for reporting this type of issues)3.10Bug fixes NOTICE message3.9Authenticated (subscriber+) SQL Injection Security Bug fixes3.8WordPress 5.8 compatibility3.7 3.6WordPress 5.8 compatibility3.5Bug fixing in the Statistics widget3.4Reactivate the Statistics widget3.3Bug fixing in the settings page3.2Upgrade bootstrap librariesuse google charts instead of jplotSanitize data3.1Security bug fixesCSS fixesUpgrade libraries2.13Removing start index page2.12Urgent bug fixing (Security Notice) in the ajax calling2.11Fix PHP Notice in the settings page2.10Bug fixing (2) in the user roles (settings page)2.9Bug fixing in the user roles (settings page)2.8.1 2.8Adding new options in the settings pagebug fixing in javascrip2.7.4Hot fixes in GEO locationsbug fixing PHP Notice: Undefined variable:2.7.3bug fixing PHP Notice: Undefined variableadding deactivation poll as modal window.
