How to transform TV into an intelligent TV option 3: Install a PlayerPortable Media Leder portable support are inch size sticks that look very similar to USB pens. Google's Chromecast is an option. To use it, you will want to connect the cable to the Chromecast directly into one of the HDMI ports on the back of the TV. Now connect the cable of USB, connecting an end to the Chromecast unit and the other in a USB port on the TV. Turn on the TV, select the appropriate HDMI number and wait for the Chromecast installation screen to be displayed. You will then be asked to download the Google app on your smartphone. Once downloaded, open the app, tap the device icon, wait for Chromecast to detect your yours (Be aware that for an iPhone, you will first need to touch "use without Bluetooth and then touch "à ," Setup setup"à ," before reaching the home page of the Google Home app). You will then be asked with the configuration instructions to follow to start using your TV as a smart TV reception TV.bad? Here is a single Fix.Buy Google Chromecast now on Amazon. Each editorial product is selected independently, although we can be compensated or receive an affiliate commission if you buy something through our links. Evaluations and prices are accurate and the items are available as the publication time. He probably heard about smart TVs, as they were heavily advertised and sold in stores everywhere. But what is an intelligent TV, exactly? Here's what you need to know about these new generations of televisions and how they work. What is an intelligent TV? Smart TV, sometimes called TV connected, connect to the internet of your home. This allows you to transmit videos and movies online, surf the Internet and do other activities that have been limited to computer or smartphones. SMART TV smearing the Internet? The same way as your phone or computer! These televisions can be connected to your broadband router via Ethernet cable or WiFi. The network connection is generally as simple as entering the network name and password. You can access Smart TV is connected to the Internet, you can access an integrated platform (basically a special app menu that opens when you turn it on) Show the features of the TV. The varier platform depending on the device manufacturer. TCL Smart TVs generally uses the Roku platform, while in Vizio Smart TV will have Smartcast. These platforms are similar, allowing you to download apps in the same way you would on your phone. Some popular smart TV apps include Netflix, Hulu, YouTube and Spotify, but there can be hundreds to choose from. How much is smart TV cost? How you might expect, intelligent televisions typically cost more than their counterparts ". But they are still quite convenient, with small screens models like this 32-inch Hisense TV, starting from \$ 115. At the end, a Smart TV OLED from 70 inches can easily cost several thousand dollars. Do you need an intelligent TV? You don't necessarily need an intelligent TV to transmit content online or access other apps through the TV. Instead you can use a streaming device like Amazon Fire TV Stick or Roku Streaming Stick to equip a normal TV with intelligent functionality. However, if you are in the market for a new TV, you will find many products available today are, in fact, intelligent. So, even if you are not necessarily shopping for this function, could be included in the TV you select. If this is the case, you will find that the intelligent features will open new We possibilities for the way you look at TV, movies and other content. Photo of courtesy: Freestocks / Instock of 2022, predict statesmen There will be 119 million smart TV users around the world. However, smart TVs continue to have a strong competitor - streaming devices. They can be small, but these devices are powerful and convenient. With so many new high-tech devices that come out every year, you probably have so many questions! Don't worry, we have answers. Streaming devices offer new ways to watch your favorite movies and shows, similar to Smart TV. However, go beyond the differences between smart TVs and streaming devices to answer a common question: is a smart TV better than streaming devices? Furthermore, we cover the advantages and disadvantages of popular devices, such as Roku, Apple Amazon Fire TV and Chromecast. When we combine the functionality of a traditional TV and a computer, we get an intelligent TV that connects to the Internet and allows us to transmit movies and shows from Netflix, Hulu and TV programs. Some smart TVs have even more advanced functions, including social media apps, photographic storage, voice recognition (to change channels and search for apps) and smart home controls. This means your TV TV SII compatible with intelligent home devices, including Alexa and Google Home. Photo of courtesy: Jens Kreuter / Smart TV Smart TV are also easy to use. Furthermore, there are options that offer great vision experiences and fair prices. LG Electronics 55-inch OLED TV OLED and TCL, "à  S 4K Smart LED TV are a couple of best intelligent TVs on the market. If you want an extraordinary quality of images and wall functionality, consider LG. For a cheapest choice, check the TCL with its built-in Roku experience and smart home compatibility. However, many people also speak of streaming devices to watch their favorite movies and shows. Some users prefer streaming devices for their exceptional high-tech features. A streaming device has similar functions as an intelligent TV. We land the differences and cover popular examples of streaming tools. A streaming device connects to the Internet, but also connects to a TV via an HDMI port. Given people access to various channels, media apps and online services with the help of a remote control. Note: You cannot use a streaming device alone. It is necessary a TV, a monitor or a computer to view the content from the device. Photo of courtesy: Wikimedia Commons Just Like Smart TV, streaming devices are easy to navigate and provide excellent quality of the image and fair prices. Depending on the device, you can use the main video sites like Netflix, Hulu, YouTube and Amazon Prime. Streaming devices are also available in the form of small boxes or USB connection sticks. The first four streaming devices competing in the market are Roku, Amazon Fire TV, Chromecast and Apple TV. Pro: Roku offers streaming sticks and boxes, such as Roku Stream Stick + and the new ultra Roku. Many users love Roku for its simple interface and its abundant number of app streaming. With the Roku remote control, you can use voice control to find and watch the content without effort. In addition, Plus models and other models support 4K HDR for an improved viewing experience on the TV screen. Cons: The Roku system has many advantages, but has some against. For example, premium channels require a monthly fee and you need to configure subscriptions to access certain channels for live TV. Another inconvenience is that only the screen reflects music, photos and videos from your phone's Roku app. PRO: Another favorite fan is Apple TV, which comes with impressive features such as voice control and the possibility of renting videos from the iTunes store. Of course, video services are also available on the platform. All you need to do is download the apps from the Store App. If you have a Mac or iPhone, it's easy to integrate them on TV. For example, Apple TV supports AirPlay, allowing you to connect your Mac or iPhone to the TV screen. Also, you can listen to your music using Apple Music or Podcast using the Podcast app. It is a solid platform to access all your Apple content. Cons: Apple TV is fantastic both and you are an iPhone or an Android user. However, Android users may avoid Apple TV for a great reason. AirPlay makes it easy for iPhone users to slide their devices to Apple TV devices. However, streaming content from an Android device to Apple TV is difficult. People who use Windows will face the same problem. The second disadvantage is the price. Apple TV is expensive, it costs \$ 99 or more. Unlike other streaming devices, it is only available in a box version. A USB stick version of Apple TV does not exist. Pro: If you are a great fan of Alexa and Amazon Prime Entertainment Content, take a look at Amazon Fire TV. With Alexa, users Command TV to find their favorite movie or turn on the lights in the living room. Just like Roku and Apple TV, Amazon Fire TV lets you watch movies and shows from the main streaming services. Amazon Fire TV offers box or stick models to connect to the TV. Some models provide 4K capabilities to enjoy content in HD quality. The system is also easy to configure and use. Photo of courtesy: Raysonho / Wikimedia Commons against: The Bad News You need a first Amazon Amazon To access the Amazon Prime functionality. The device does not only offer unique video content. Another problem is that vocal search only works on Amazon services. If you want to find a movie on Netflix or Hulu, you have to search for it manually in the app instead of using voice research. Some reviewers have also complained about the fact that Amazon self-promotes too much inside the platform. Pro: Google offers cheap chromecast and more expensive Chromecast ultra. Chromecast is unique because you don't need a remote control to check it. Instead, use the phone and laptop in streaming. This means you can play or pause directly from your devices (Android or IOS). It also works with Google Home. Cons: Some Disadvantages of Chromecast include limited streaming options. You can scroll from your devices, but you cannot connect to each app, channel or file. Roku and Apple TV support more apps and files than Chromecast. For those who are less experienced with a smartphone or a computer, streaming with a chromecast could be more difficult too. Streaming devices and smart TVs are like they have the same functions, right? For the most part, yes. If you already have a smart TV, you don't need a streaming device. However, if you have extra needs or more oldest smart TV, a streaming device could be a better choice for you. Streaming devices provide more content. If you want infinite entertainment options, a streaming device is more advantageous. Some streaming devices offer software updates to improve speed, interface and apps. For those who despise loading delays, a streaming device is the best option. Another advantage of streaming devices is that they are portable. When you travel, you can take it with you to capture your beloved shows and movies. Make sure that Wi-Fi is available. Overall, if you want an economical and portable portable tool that provides more content and updates to improve your features and interfaces, go for a streaming device. device.
