Where do i find my files. Where do i find my downloaded files on my android. Where do i find my files on my android phone. Where to find my files on android. Where are files stored on android. Where do i find my pdf files on my android phone.

On your phone, you can usually find your files in the Files app . If you can't find the Files app, your device manufacturer might have a different app. Learn how to get help for your specific device. Find & open files Open your phone's Files app . Learn where to find your apps. Your downloaded files will show. To find other files, tap Menu . To sort by name, date, type, or size, tap More . Sort by. If you don't see "Sort by," tap Modified or Sort . To open a file, tap it. Delete files Open your phone's Files app . Tap a file. Tap Delete . Delete. If you don't see the Delete icon, tap More . Delete . Share, print, save to Drive & more Share files Touch and hold the file. Tap Share . Do other actions, like printing or adding to Google Drive To open a file, tap it. At the top right, look for more options. If needed, tap More . Find music, movies & other content You can download files like music, movies, or books in various apps. To find that content, go to the app where you downloaded it. For example, learn how to find videos downloaded in the Google Play Movies & TV app. Transfer files to a computer When you connect your phone to a computer by USB cable, open the computer's "Downloads" folder to find the files that are on your phone. Learn how to move files between your computer and your phone. Get answers from community experts With all of the amazing features available on Android, like a high definition camera, apps for everything, lightning fast processing power, and so on, there is one thing that can be less than convenient: the difficulty of finding downloaded files. It's almost as if your smartphone's downloads disappear just as soon as the transfer of data has been completed. In fact, unless you know where to look, on some phones that's effectively what happens. So let's tell you where to look for downloads on your Android phone. It's a little place called the app drawer. Check out the products mentioned in this article: Samsung Galaxy S10 (From \$899.99 at Best Buy) How to find downloads on your Android device 1. Open the Android app drawer by swiping up from the bottom of the screen. 2. Look for the My Files (or File Manager) icon and tap it. If you don't see it, instead tap the Samsung icon with many smaller icons inside it — My Files will be among them. On some Android devices, the app will be called File Manager instead of My Files. Steven John/Business Insider 3. Inside the My Files app, tap "Downloads." For files downloaded via Chrome, you can access them by tapping the three dots at the top-right corner of the Chrome browser. Steven John/Business Insider You should now be able to see all of your downloads. Related coverage from How To Do Everything: Tech: It can be incredibly convenient to use Android to download files and forgo a computer for things like editing a document for work, adding to a presentation for class or downloading a photo that you want to use as a wallpaper. The problem is, it's not always clear where the file you just downloaded was saved on your phone or tablet. When Android first launched, finding files was especially cumbersome due to the fact that not every Android device came with a file manager app. A lot has changed since then. Most Android devices now come with some sort of file manager preinstalled, and for those that don't, there's a better alternative anyway. Find the file manager app Left: Files app on a Pixel 3. Right: My Files on a Galaxy S10 Plus. Screenshots by Jason Cipriani/CNET By far the easiest way to find downloaded files on Android is to look in your app drawer for an app called Files or My Files. Google's Pixel phones come with a Files app, while Samsung phones come with an app called My Files. Regardless of which device, once you find and open the file manager, use it to look for the Downloads folder and open it. There you will find your downloaded files in chronological order (newest to oldest, in most cases). You can, however, change how the files are sorted. In Samsung's My Files app, tap on the three-dot menu icon and then select "Sort by." In the Files app on a Pixel phone, tap on the "Modified" text to change how the app sorts your files. Once you've located your downloaded files, you can open a file with a tap, or bring up more options with a long-press on the file. Better yet, use Files by Google The Files by Google app is one of the best file manager apps for Android users. Screenshots by Jason Cipriani/CNET If you don't like the default file manager app on your Android phone, or it doesn't have one, download the Files by Google app (formerly Files Go) from the Play Store. The app is easy to navigate, provides quick access to your downloads folder and helps you free up storage space. When you open Files by Google, the app will recommend various options like clearing out app caches, removing junk files or deleting backed-up photos from your device. There's even an AirDrop-like file-sharing feature baked into the app that makes it really easy to share files with someone who is nearby. Once you've installed the app, you can find your downloaded files by selecting the Browse tab at the bottom of the app, then tapping Downloads. Tap a file to open it, or long-press on it to select the file and delete, share or rename it. +31 more See all photos Finding the downloaded files on your Android device is usually an easy task. The steps to find them vary slightly, depending on what kind of device you have, but for some reason, the downloaded files tend to "disappear" sometimes. The files haven't disappeared, though. You just have to dig in to your Android device's settings to find them. In some cases, you may need to install a file manager to help you keep those downloaded files under control. Let's take a look at some options. Look in the Downloads Folder Like most operating systems, Android does come with a "Downloads" folder to store all your downloaded files. This won't usually be available as an app unfortunately, but as a folder within a file manager. You can find the Downloads folder using a third-party file manager, but each Android phone also has its stock file manager app that you can equally well use. The native app can vary based on the manufacturer or even your mobile carrier. On stock Android, this app is just called "Files." Simply open it then tap "Downloads" to access the Downloads folder. Your downloaded files should be listed, with the most recent one at the top. If you tap the three-dotted menu option at the top right, you can do more with your downloaded files — you can clear your download history, edit, share, and sort files. To make your downloads easier to find, you can use the "Sort by" option and organize them either by time, type, name, size, ascending or descending — whatever works best for you. Alternatively, you can select individual files in your downloads list by tapping the three-dot menu icons next to them, which will bring up various options like Delete, Share, Rename, and so on. If you want to bulk-select or bulk-delete files in your downloads, long-tap one of the files until checkboxes appear for each item, then tap each subsequent file you want to carry out the same action for. Check Your App Settings Many apps have their own download settings. Instead of sending your Android downloads to your device's download folder by default, they're sent to the app's download folder. Case in point: WhatsApp by default downloads images and videos to your phone and keeps them in its own folder. In the "Files" app, this is separated into WhatsApp Images and WhatsApp Videos. If you're using a third-party file explorer, you'll find WhatsApp downloads in "Internal Memory -> WhatsApp -> Media". You can also check within your app's settings. You may be able to change where files are downloaded by default to keep everything more organized on your device. Use a Third-Party File Explorer While the built-in file manager works well enough in Android, it's not perfect. If you can't find what you're looking for, try a third-party file explorer app. There are a variety of Android file managers to use. However, a highly popular and useful option is X-plore File Manager. The dual-pane feature makes it a personal favorite. It's easy to use. The menu on the right includes a Find feature. You don't need to know the full file name. I also love that search tips are included in the search box. Enter part of your file name and locate your file in seconds. Download Another File If you can't find your Android downloads now, why would you download something else? When you download a file, you get a notification in your device's notification tray. The notification looks like a checkmark. Tap it and you're sent to the downloaded file, meaning you can also check out where the download came from. This is an easy way to see where your downloads are stored by default. How to Find the Downloads Folder From Your Windows Computer If you just can't stand how small things look on your Android device, you can always look at your downloads on your computer. Connect your Android device to your computer with a USB cable, and within a few seconds, you should see a prompt appear offering to show you the contents of the device you connected. The next window will offer various options such as import/export (among others). Click on the one that allows you to see the contents of your Android device. Click on the Phone option and scroll down until you find the Downloads folder. Just open it and do whatever you please. Find Your Downloads in Chrome You downloaded an image last week but accidentally erased it from your device. To recover that image, open Chrome, tap the three-dotted menu icon at the top right corner, then tap Downloads to see your list of downloads from the browser. If you want to find a specific type of file such as a video, tap on the drop-down menu beside Downloads and tap on videos (or whatever file type you're looking for). Find Your Downloads in Edge Microsoft Edge browser makes it relatively easy to find your downloads. Open Edge, then tap the three horizontal dots at the bottom-center of the browser and tap "Downloads." That's it. All your downloads should now be visible to manage. Find Your Firefox Downloads Firefox makes it just as easy to find your downloads. Once you have the browser open, tap on the three vertical dots at the top-right (or bottom-right, depending on your personal setup) of your display. After that, tap "Downloads," and you're good to go. Find With Integrated Search Google also makes it easy to find any file on your device with the integrated search feature. Unlike other options on this list, it's not just for finding files. You can find texts, phone calls, apps, data within apps (only if the app supports integrated search), images, and of course, downloaded files. The only problem is you'll need to know at least a small portion of the file name. If you have no clue what the file is named, this option might not help. Also, it's not available on all Android versions. For this example, I'm using Android 12. Pull down the notification tray and tap the search icon to start integrated search. If it's your first time using the service, tap "Start." You'll need to allow the requested permissions. It asks for a lot, but the service scans everything on your phone to search for files and data. If you're not comfortable giving these permissions, just back out and use one of the previous methods instead. If you have used the service before or if the service is already enabled, enter your search term and tap a result. Frequently Asked Questions For app-specific files, you may not be able to change where the files are saved. However, check the app's settings to see if there is an option to change the file location. For files downloaded from your browser, you'll find an option within Settings on most browsers to choose where downloads are stored. By default, they use the Downloads folder. However, you change that location if you want. One of the more frustrating things about downloaded files on Android is the file not opening immediately when you download it. While some files open instantly when you tap the notification, others seem to just disappear. When they disappear, you also don't get to see the file location. This is usually because you don't have a default app set for a specific file type, the file is opening in the background in an app that's already open, your device has no app to support the file type, or it's a simple glitch. I've had this happen several times when nothing was wrong, except my device didn't open the file when requested the first time. This all depends on the app you're trying to download files from. Some apps will allow you to choose a cloud drive folder if you have the cloud service's app on your device. For instance, you could store all your images in the cloud automatically after setting up the cloud service's app. Image credit: The Average Tech Guy on Unsplash Is this article useful?
